DETAILED ACTION

1. The amendment filed 09/29/2009 has been received and considered.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 09/29/2009 was filed, and the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

- 3. Claim 23, 25, and 28-31 are allowed.
- 4. The following is a statement of reasons for the indication of allowable subject matter:

While Hultgren et al. teaches a base plate module configured to couple to a scanning device, a first scanning module configured to couple to the base plate module, the first scanning module being configured to position a first study cast of a first dental arch within the scanning device to generate a first electronic model of the first dental arch, and a second scanning module configured to position a second study cast of a second dental arch within the scanning device to generate a second electronic model of the second dental arch, Kim teaches an articulator configured to couple to the first and second scanning modules to form a combined scanning apparatus, the articulator being configured to position the first scanning module relative to the second scanning module to orient an occlusal surface of the first study cast towards an occlusal surface of the second study cast, generating the electronic models corresponding to each of the dental arches within a common coordinate system, and Marshall et al. (US 6579095 B2 listed on IDS filed 09/29/2009) teaches a scanning module with a plurality of spheres, scanning the spheres and transforming the scanned position data of the spheres to generate a electronic model,

none of the prior art of record discloses a method for modeling of a dental articulation, including:

(Claim 23) "...the first scanning module being configuring to ... position of ... a first dental arch...including a first plurality of alignment spheres configured to be scanned by the scanning device;...

a second scanning module configured to position of .. a second dental arch...including a second plurality of alignment spheres configured to be scanned by the scanning device,...

the data processing system being configured to obtain position data of at least one of the alignment spheres from the combined scanning apparatus, the data processing system also being configured to transform position data of the first electronic model and the second electronic model based on the position data obtained from the alignment sphere, whereby a composite electronic model in a common coordinate system is generated..."

(Claim 28) "... the first scanning plate module including a plurality of alignment spheres... to obtain position data of ... the lower jaw ... and...the alignment spheres...

... the second scanning plate module including a plurality of alignment spheres... to obtain position data of ..the upper jaw...and... the alignment spheres...

scanning one of the alignment spheres within the combined scanning apparatus to obtain position data of the alignment sphere within the combined scanning apparatus; and transforming the scanned positional data of the first and second electronic models based at least in part on the position data of the alignment sphere within the combined scanning apparatus to generate a composite electronic model in a common coordinate system..."
